

Mobile Visibility and Control

Innovative mobile solutions to empower collaboration and management for a faster, more agile supply chain.

Key Solution Features

- Mobile Alerts and Transactions
- Cloud-based
- Flexible System Integration
- Multiple Platforms and Devices

Leveraging Mobile for a Competitive Supply Chain

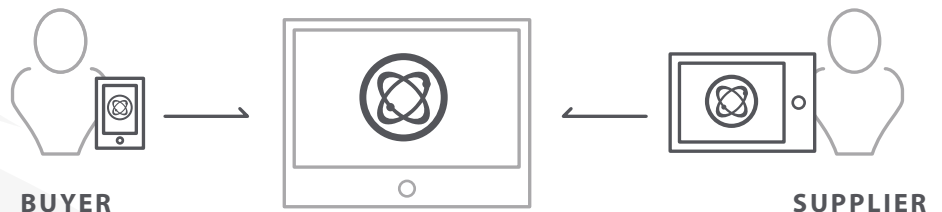

Smart mobile devices are rapidly overtaking the enterprise. For supply chain organizations searching for new ways to compete in global markets, the mobile revolution provides a unique opportunity. Employing a mobile facet to your supply chain management helps increase visibility inside and outside the four walls, deliver the ability to monitor operations real time from virtually anywhere, and speed up tactical and strategic decision making.

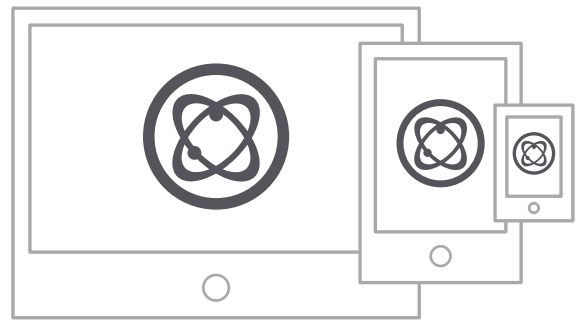

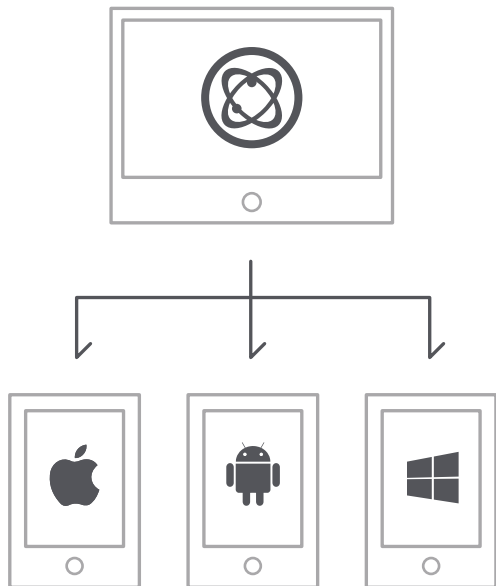

Collaboration Everywhere

Our OneSCM® collaboration solution utilizes innovative technology to deliver the power of today's smart mobile devices across your trading partner network.

OneSCM enables buyers and trading partners alike to leverage smart mobile devices for transactions and communication — creating a more continuous workflow across your supply chain. With mobility-enabled transactions and notifications, orders can be sent and acknowledged more quickly, workflow approvals can be expedited, and potential disruptions in materials availability can be addressed more proactively. Information is delivered directly to the buyer or supplier's fingertips — eliminating the need to be tethered to their computers for updates and approvals.

OneSCM's mobile access provides always-available visibility and more up-to-date information so that you can address disruptions and changing business conditions faster and with more confidence—for a more agile supply chain.

Mobility

Multiple Platforms

The OneSCM solution delivers an agnostic interface accessible from multiple mobile platforms. Whether your company or your suppliers use iOS, Android, or Windows, they will all be able to access the same integrated system through the same mobile interface. This means more suppliers can join easily, creating real-time information and collaboration throughout your network.

Multiple Devices

Tablets and smartphones access the same responsive mobile interface where all information about your network is gathered in one place. This flexibility means no hardware changes to your existing mobile deployment, and your suppliers and vendors aren't locked into a single form factor — making it easier for more partners to participate.
